J. Bacteriol. 184:2005-2018(2002).

-!- FUNCTION: Poorly processive, error-prone DNA polymerase involved in untargeted mutagenesis. Copies undamaged DNA at stalled replication forks, which arise in vivo from mismatched or misaligned primer ends. These misaligned primers can be extended by pollv. Exhibits no 3'-5' exonuclease (proofreading) activity. May be involved in translessional synthesis, in conjunction with the beta clamp from pollII (By similarity).

-!- CATALIYIC ACTIVITY: N deoxynucleoside triphosphate = N diphosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                    STRAIN=ATCC 25586;

The Complex during spermatogenesis, an endoprotease complex that
Catalyzes the intramembrane cleavage of integral membrane proteins
Such as Notch receptors (lin-12 or glp-1). Involved in spermatid
formation during meiosis II. May be required for proper
localization of macromolecules that are subject to asymmetric
Commation during permatogenesis.
Complex, a complex probably component of the gamma-secretase
complex, a complex probably composed of the presentilin homodimer
(Sel-12, hop-1 or spe-4), nicastrin (aph-2), aph-1 and pen-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -!- SUBCELLULAR LOCATION: Integral membrane protein. Predominantly located in the endoplasmic reticulum and in the cis-Golgi.
-!- DEVELOPMENTAL STAGE: BXPressed during la stage, during spermatogenesis, when hermaphrodites produces sperm.
-!- SIMILARITY: Belongs to the presentlin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gardner A.;
Submitted (MAY-1996) to the EMBL/GenBank/DDBJ databases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        or send an email to license@isb-sib.ch).

Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

-!- FUNCTION: Essential for normal development of the vasculature. May represent a naturally occurring ligand of the immunophilins FKBPS9 and FKBP12. May function as an membrane anchoring protein. May attimulate the p7086K pathway. May inhibit cell proliferation and increase IL2 production (By similarity).

-!- SUBUNIT: Monomer. Interacts with notphosphorylated MET and is released upon receptor phosphorylation. Interacts with FKBP59 and FKBP12. Part of a SCF-like complex consisting of CUL7, RBX1, SKP1,
                                                                                                                                          ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

WITH 1-DOMAINS DO NOT UNDERGO PROTEASE CLEAVAGE.
SIMILARITY: Belongs to the integrin alpha chain family.
SIMILARITY: Contains 1 WMFA domain.
SIMILARITY: Contains 7 FG-GAP repeats.

-! FUNCTION: Guanine nucleotide-binding proteins (G proteins) are involved as a modulator or transducer in various transmembrane signaling systems. The beta and gamma chains are required for the Grasse activity, for replacement of GDP by GTP, and for G protein-effector interaction.

-! SUBUNIT: G proteins are composed of 3 units, alpha, beta and

                                                                                                                                                                                                                                                          ACTIVITY OF G PROTEIN ALPHA SUBUNITS THEREBY DRIVING THEM INTO THEIR INACTIVE GDP-BOUND FORM. ASSOCIATES SPECIFICALLY WITH THE ACTIVATED FORMS OF THE G PROTEIN SUBUNITS G(I)-ALPHA AND G(2)-ALPHA BUT FAILS TO INTERACT WITH THE STRUCTURALLY AND FUNCTIONALLY DISTINCT G(S)-ALPHA SUBUNIT. ACTIVITY ON G(Z)-ALPHA IS INHIBITED BY PALMITOYLATION OF THE G-PROTEIN (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                        Koelle M.R., Horvitz H.R., "EGL-10 regulates G protein signaling in the C. elegans nervous system and shares a conserved domain with many mammalian proteins.";
                                                                                                                                                                                                     Cell 84:115-125(1996).

ö
The sequences given in AARA0053-101 are peptide fragments derived from the Haemophilus influenzae type b (Hib) outer membrane proteins P1, P2 and P6. These peptides may be used in a vaccine against this infection and antibodies against these peptides may be used in test kits to detect H. influenzae in a sample. The vaccine may further comprise a immunogenic or influence in a sample or the peptides may be modified with lipids, or linked to synthetic PRP as Synthetic lipoglycopeptide conjugates to produce alternative vaccines. The present sequence is a polypeptide encoded by one of a large number of 5' ESTB derived from mRNAB encoding secreted proteins. The 5' ESTB were prepared from total human RNAB or polyA+ RNAB derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dr primed cDNA libraries. Such ESTB are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAB and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTB are derived from mRNAB with intact 5' ends and can therefore be used to obtain full length cDNABs and genomic DNAB. 5' ESTB are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for

The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB53300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Note: The sequence data for this patent is based on equivalent patent WO20177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The invention discloses a composition comprising two composition of the mucleic acid sequence. Also derivative or allelic variation of the mucleic acid sequence. Also claimed are a vector comprising the novel polymuclectide, a host cell calmined are a vector comprising the novel polymuclectide, a host cell comprising the vector, a method for identifying a mucleotide sequence which is differentially expression of the polymucleotide sequence that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal compound that regulates the expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the composition, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the polympetides or method for identifying a compound to main an animal of one or more of the polympetides given in the activity in an animal of one or more of the polympetides or their antibodies. The polymucleotide or the compound that sequence composition comprising the one or more polympetides or their antibodies. The polymucleotide or the compound that in treating pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene for the sequence presented is a rat protein (shown in Table 2 of the sequence data for this patent did not form part of the printed contriction the sequence data for this patent did not form directly from WIPO at perification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention discloses a composition comprising two or more isolated rat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                    Rat; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; CCI; spared nerve injury; SNI; Chung.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      27-FEB-2003.
                                                              the invention discloses a composition two remorations.

The invention discloses a composition of the mucleic acid sequence. Also calsimed are a vector comprising the novel polymuclectide, a host cell comprising the novel polymuclectide, a host cell comprising the novel polymuclectide, and acid sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymuclectide sequence that is differentially expression of the polymuclectide sequence that is differentially expression of a polymuclectide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the composition, a compound that regulates the activity of one or more of the composition, a method for identifying a paramaceutical composition, a method for identifying a compound that regulates the activity of one or more of the polymetides given in the specification, a method for identifying a compound that regulates the activity in an animal of one or more of the polypeptides or their antibodies. The polymucleotide or the compound that complying a medicament for treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymucleotide or the compound that in the sequence presented is a rat protein (e.g. gene therapy). The sequence presented is a rat protein (e.g. gene therapy) in an animal expanding in the parameter of the sequence date for this patent did not form part of the printed or precipication) which is differentially expressed during pain. Note:

The sequence date for this patent did not form part of the printed or province the specification or province the sequence date for the province form did not form part of the printed or the component of the printed or the component of the printed or the component of the printed or the component of the printed or the compone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention discloses a composition comprising two or more isolated rat

AAR07043;

Haemophilus influenzae.

```
The sequence is that of a mutant human prourokinase, in which a neutral amino acid in the epidermal growth region has been replaced with a basic amino acid, or an acidic amino acid has been replaced by a non-acidic amino acid. Preferred replacements are 16Gly->Lys, 38Gly->Lys and 45Asp->Asn. The mutant has an increased half-life in blood as compared to the prior art mutant with a deleted RGF region. It has improved affinity for fibrin, and has other features the same as human prourokinase. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                           New human pro-urokinase mutants with thrombolytic activity - have a neutral aminoacid in the epidermal growth factor region replaced with a basic aminoacid, or an acid residue replaced with a non-acidic residue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Immunogenic composition comprising an antigenic component, useful for diagnosing Alzheimer's disease.

Vikkula M;

WPI; 2001-557643/62. N-PSDB; AAS13483. New VMGLOM genes and polypeptides, useful in gene therapy or for preventing, treating or alleviating disorders with vascular component, e.g. varicosities, cardiopathies, cerebral disorders or cancer.

Claim 5; Fig 12; 157pp; English.

The invention discloses a composition comprising two or more isolated rate or human polynuclectides or a polynuclectide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynuclectide, a host cell comprising the vector, a method for identifying a nuclectide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agente that increases or decreases the expression of the polynuclectide sequence that is differentially expressed in neuronal tissue of a first animal compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the composition, a method for producing a pharmaceutical composition, a certod for identifying a compound useful in treating a perilication, a method for identifying a compound useful in treating continuates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more companies and a pharmaceutical composition of more polymetides or their antibodies. The polymuclectide or the compound that medulates its activity is useful for preparing a medicament for treating

New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

Claim 1; Page; 1017pp; English.

The present invention relates to the isolation of novel human and mouse VMGLOM polypeptides (long form and short form), and the nucleic acid molecules encoding them. VMGLOMs (also referred to as glomuline) are a subtype of venous malformations (VMS) called glomangiomas. In humans, VMGLOM has been mapped to chromosome 1p21-22. VMGLOMs and the nucleic acids encoding for them are useful as a medicament or for incopration into a diagnostic kit. Such medicaments are useful for preventing, treating or alleviating disorders with a vascular component, particularly where alteration of vascular smooth muscle cell phenotype is needed, e.g.

injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. genetherapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from MIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New human kinases and phosphatases and polynucleotides, useful for diagnosing, treating or preventing autoimmune or inflammatory disorders (e.g. AIDS, allergy or anemia), multiple sclerosis, osteoarthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            glomerulonephritis; Goodpasture's syndrome; gout; Graves' disease; Hashimoto's thyroiditis; irritable bowel syndrome; multiple sclerosis; osteoarthritis; osteoporosis; pancreatitis; Reiter's syndrome; rheumatoid arthritis; Sjogren's syndrome; uveitis; infection.
 spinal segmental nerve injury (Chung), chronic constriction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Li JX;

equence operably linked to KPP NA, a cell transformed with the recombinant polymucleotide, at ransgenic organism comprising the recombinant polymucleotide, at ransgenic organism comprising the recombinant polymucleotide, an anti-KPP antibody, screening for compounds which bind to or alter the art/agonists of KPP, screening for compounds which bind to or alter the activity or expression of KPP, microarray where at least one element is KPP NA, generating an expression profile of a sample containing affixed in distinct physical locations on a solid substrate (where at affixed in distinct physical locations on a solid substrate (where at corpymucleotides and profile of a sample containing or polymucleotides of a target KPP NA). The kinases and phosphatuses contiguous mucleotides of a target KPP NA). The kinases and phosphatuses contiguous mucleotides of a target KPP NA). The kinases and phosphatuses contiguous mucleotides of a target KPP NA). The kinases and phosphatuses contiguous mucleotides of preventing disorders associated with aberrant expression of KPP, particularly cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, paroxysmal conturnal haemoglobinuria, polycythaemia vera, psoriasis, paroxysmal conturnal haemoglobinuria, polycythaemia vera, psoriasis, paroxysmal caidosis, anaemia or mental retardation), neurological disorders (e.g. Alrbinary disorders (e.g. Alrbi, acquired immune thyroiditis, contact dermatitis, contact dermatitis, contact dermatitis, asthma, autonimmune thyroiditis, contact dermatitis, rothmar disease, disease, Hashimoto's thyroiditis, contact dermatitis, rothmar of disease, disease Hashimoto's thyroiditis, irritable bowel syndrome, conting the sclerosis, osteoarchritis, sjogren's syndrome, contactid arthritis, sjogren's space acsetul for creating transgenic animals to model human disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Translational profiling; expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MTGolon major histocompatability complex; myelona; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.
                                                                                   The invention relates to an isolated polypeptide, which is a human kinase and phosphatase, KPP (KPP-1 to KPP-18). Also included are the encoding polynucleotides KPP NA, recombinant polynucleotide comprising a promoter sequence operably linked to KPP NA, a cell transformed with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide, or the antibody that binds to this polypeptide. Is useful for traating cancer. The polypeptide is also useful for class II MHC-binding polypeptide. The polypeptide is also useful for class II MHC-binding polypeptide. The polypeptides and class II MHC-binding polypeptide. The polypeptides and particularly useful for treating or preventing myeloma, clon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (BPY) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed profiled the printed and profiled the profiled of the printed profiled the printed the profiled the printed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö,

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease inhibitor.

Transporter, cytoskeletal protein, receptor or transcription factor. The cransporter, cytoskeletal protein, receptor or transcription factor. The prolypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified colypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed cass is or class in MHC binding polypeptide. The polypeptide and polypeptide are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, Immese are also useful for screening agents for treating the above mentioned diseases. This sequence represents and expressed protein tag (RPT) isolated from human tissue for translational compositioation but was obtained in abectronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                     New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma or

                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                          The present sequence represents mouse protein tyrosine phosphatase (PTPepsilon) protein. The DNA encoding this protein is useful for the production of the recombinant protein, which is a protein tyrosine phosphatase which may be involved in the growth and differentiation of osteoblasts and brain cells and is useful for identifying compounds that modulate PTP-OB activity and as a therapeutic agent for treating PTP-OBrelated diseases. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                        DNA encoding protein tyrosine phosphatase PTP-OB - isolated from human osteoblasts and useful for production of recombinant PTP-OB.
                                                                                                                                                                                                                                                                                                                                                    Gaps

The invention relates to a human protein tyrosine phosphatase (PTP) denoted as PTP-OB, produced by bone and brain cells. A recombinant host cell transfected or transformed with a nucleic acid vector comprising the nucleic acid can be used for the production of the PTB-OB protein. The protein can be used to screen for modulators of PTP-OB activity, which might be useful for treating e.g. osteoporosis and cancer. The present sequence represents a mouse mPTP-psilon polypeptide sequence
                                                                                                                                                                                                                                       Protein tyrosine phosphatase denoted PTP-OB - useful for drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

US-08-475-989-33

Sequence 33, Application US/08475989

Patent No. 5579352

Patent No. 5579352

Patent No. 5579352

Patent No. 579352

Patent Sable No. Michel

TITLE OF INVENTION: Synthetic Haemophilus Influenzae

TITLE OF INVENTION: Conjugate Vaccine

NUMBER OF SEQUENCES: 56

COUNTRY: Canada

ZIP: M. 65 187

COUNTRY: Canada

ZIP: M. 65 187

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2, Application US/08173497

Patent No. 5437958

GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE GAILLEANT: Van Der Vieren, Monica
TITLE OF INVENTION: No. 5437958el Human 2 Integrin Alpha
TITLE OF INVENTION: Subunit
NUMBER OF SEQUENCES: 29
CORRESPONDENCE ADDRESS:
ADDRESSEE: Marshall, O'Toole, Gerstein, Murray & Borun
STREET: 233 S. Wacker Drive, 6300 Sears Tower
CITY: Chicago
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GENERAL INFORMATION:
APPLICANT: Guarente, Leonard P.
APPLICANT: Guarente, Leonard P.
APPLICANT: Claus, James J.
APPLICANT: Claus, James J.
APPLICANT: Cole, Francesca
APPLICANT: Kennedy, Brian
TITLE OF INVENTION: GENES DETERMINING CELLULAR SENESCENCE IN
TITLE OF INVENTION: YEAST
FILE REFERENCE: 0050.1491-003
                                                                                                                                                                                                                                                                           37.5%; Score 6; DB 2; Length 888; 100.0%; Pred. No. 1.2e+02; tive 0; Mismatches 0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             37.5%; Score 6; DB 3; Length 888; 100.0%; Pred.
